

CARGO[®]

ABSORBENT

Test Valley Packaging have developed “Cargo Absorbent” in response to increasing demand from the Airfreight industry.

Protective Layer

The challenge was to address the contamination/corrosion to aircraft parts in the cargo hold through uncontrolled condensation caused by leakage of frozen and perishable products during air transportation.

Absorbent Material

Cargo Absorbent acts as a layer of protection and is capable of absorbing **5 litres of liquid per square metre**, with a barrier coated HDPE Film base which prevents liquid penetrating through to the floor and an absorbent top layer.

Specifications

Classic (available from stock)

The classic and robust Cargo Absorbent can absorb up to 5 litres and can be cut to size.

Product code: CA1550

Width: 1.5 metres

Roll Weight: 20 kilos

Roll Length: 72.6 metres

Material weight: 183gsm

Absorption: 5 litres per square metre

Square metres per roll: 109

Perforated (lead times apply)

The perforated Cargo Absorbent is thinner than the “Classic” and is perforated at 2.5 metres.

Product code: CA1515P

Width: 1.5 metres

Roll Weight: 20 kilos

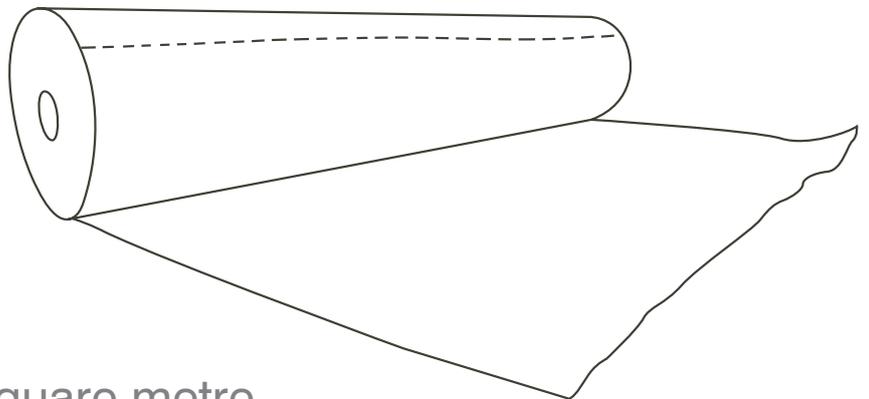

Roll Length: 151 metres

Material Weight: 183gsm

Perforated: 2.5 metres

Absorption: 1.5 litres per square metre

Square metres per roll: 227

For perishable products with temperature sensitive requirements

Pharmaceuticals, Flowers, Vegetables, Beverages, Poultry, Seafood, and live stock are just a few of the products that require special temperature requirements to be put into place in transit. Strict industry standards insist that measures to protect an aircraft are put in place.

This high performance absorbent material can absorb 5 litres of liquid per square metre.
